NEXT-TO-SKIN MERINO

With Merino wool offering many benefits, such as its light weight, ability to sustain its shape, insulation and moisture retaining properties; Merino Wool is the ideal fabric to keep close to your skin. A collection of base layers that can be worn at home and outdoors with maximum comfort and minimum fuss.

WEFT-KNIT PLUSH

Knit with a single yarn, The result is a tubular knit fabric with very high flexibility and stretch. 3D garments are knit with minimal or no seams, the future of maximizing the benefits of a yarn of wool.

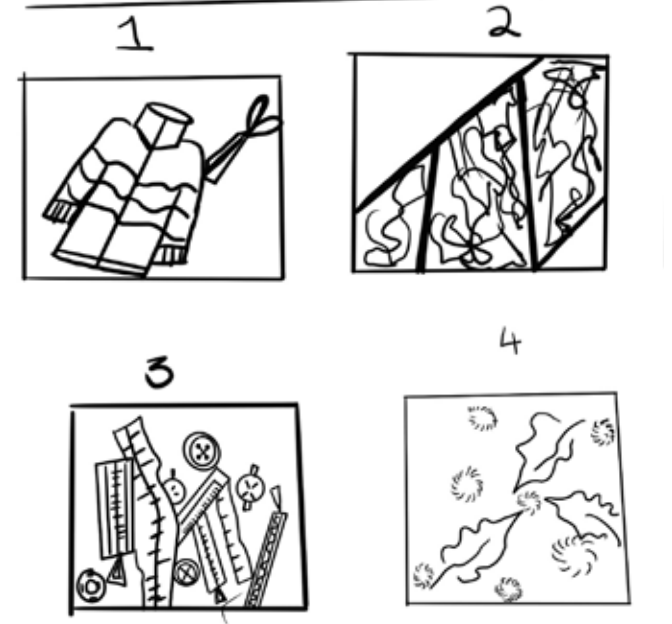

DOWNCYCLING & FLEECE

A process of turning waste material into yarn. Down can be used to fill the illustrated jackets for padding and warmth while the separated accessories such as zippers and buttons can be reused to finish garments.

HOW DOWN CYCLING WORKS

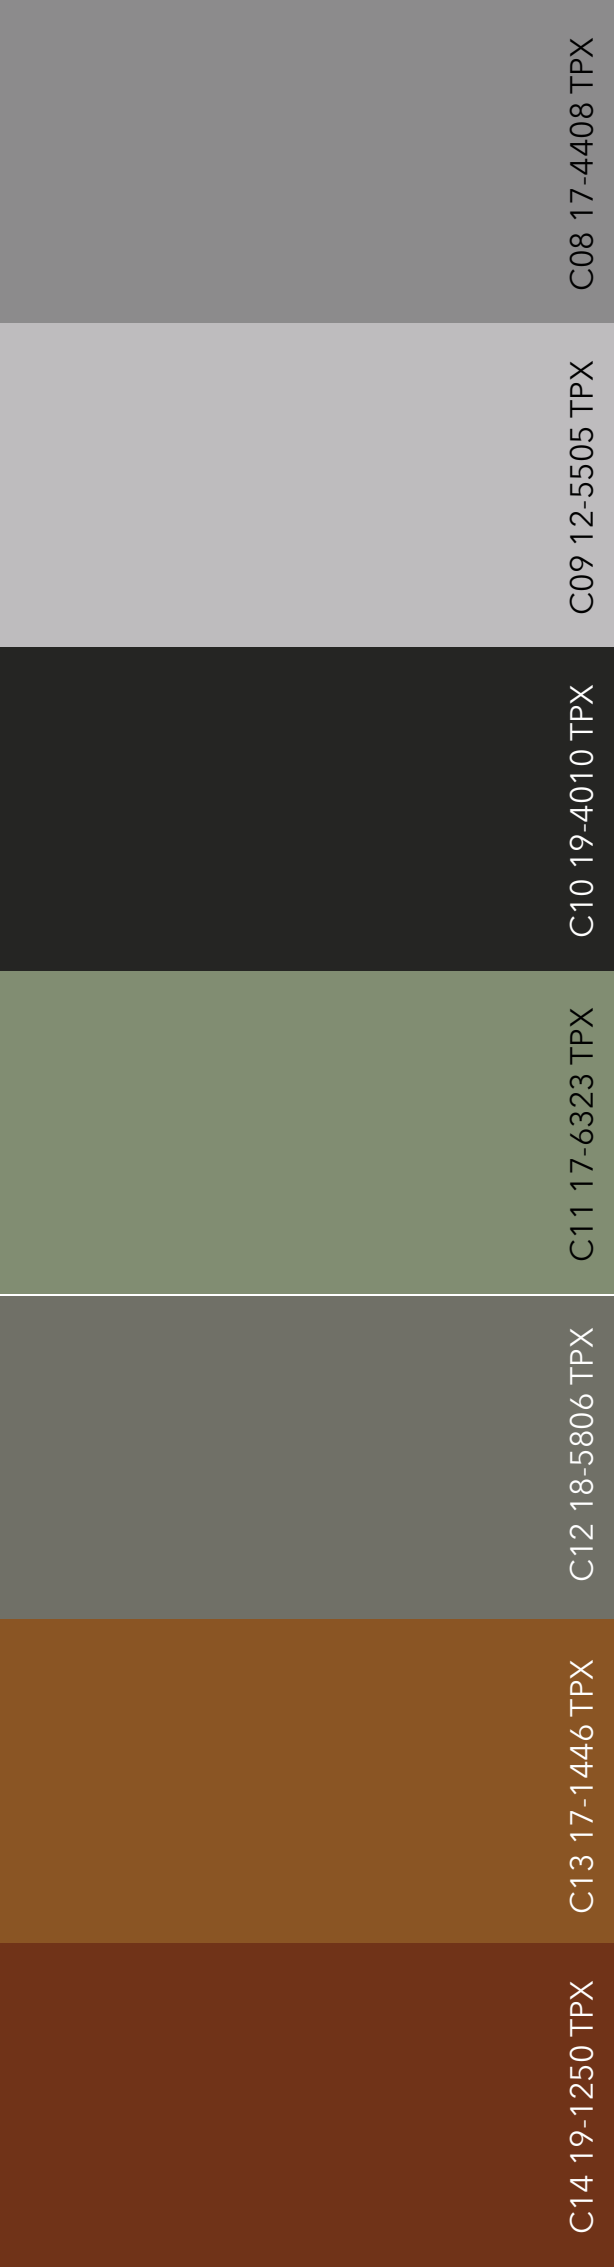

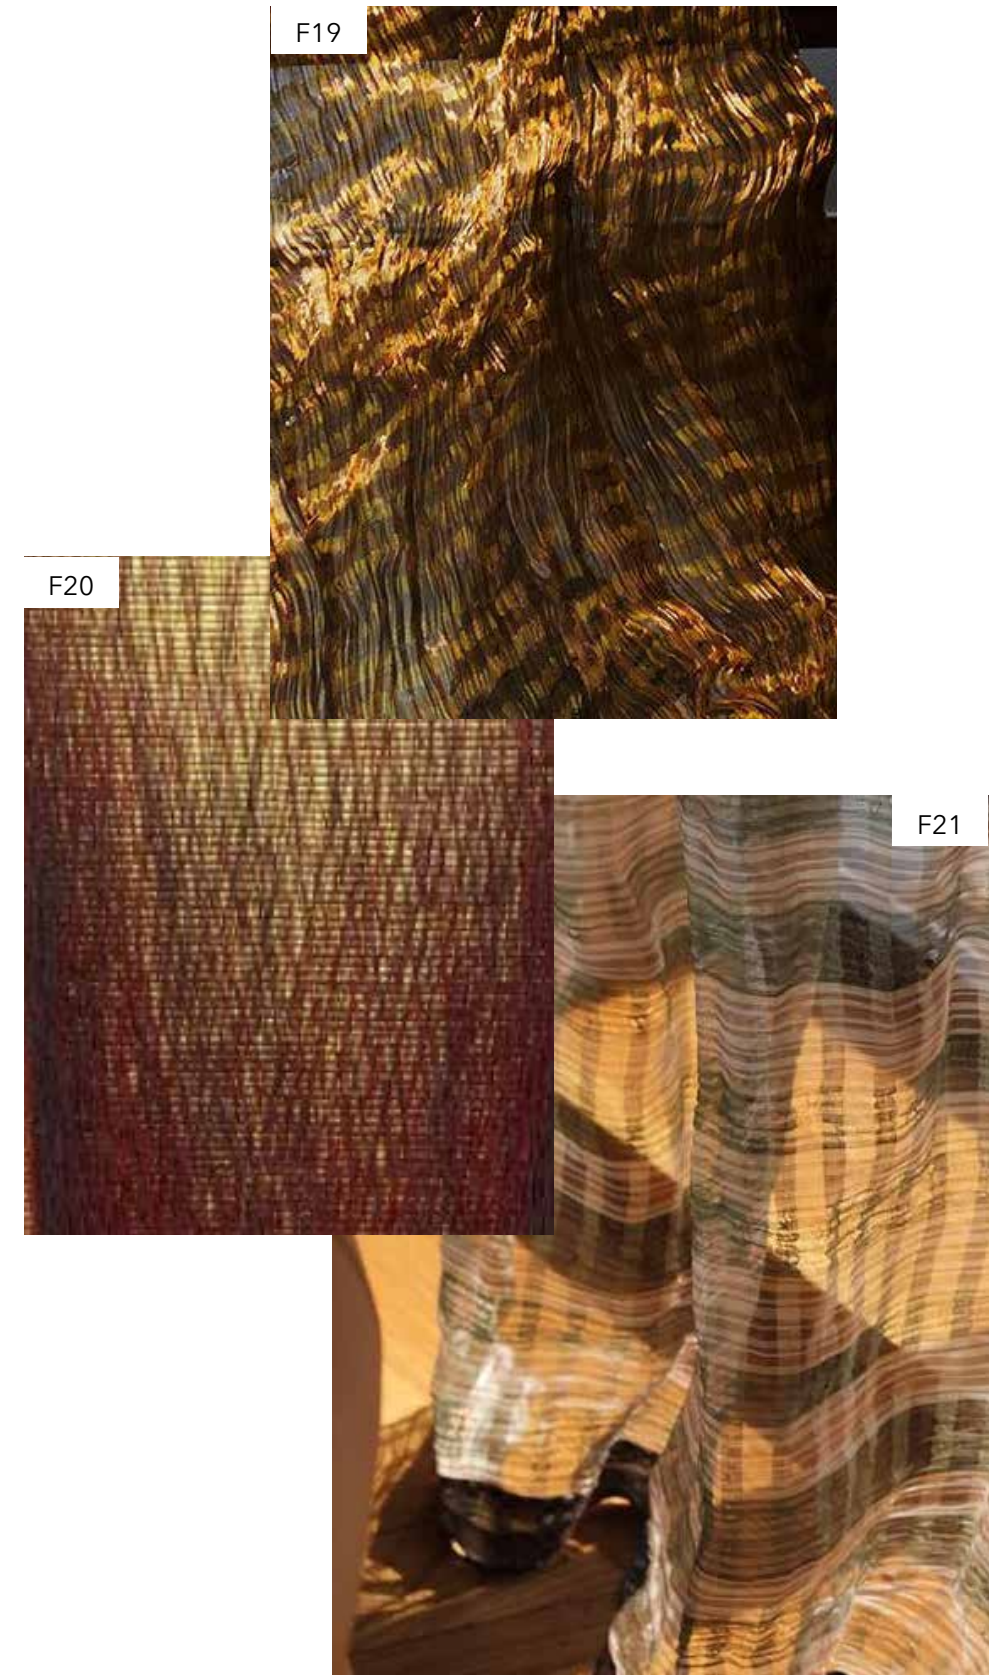

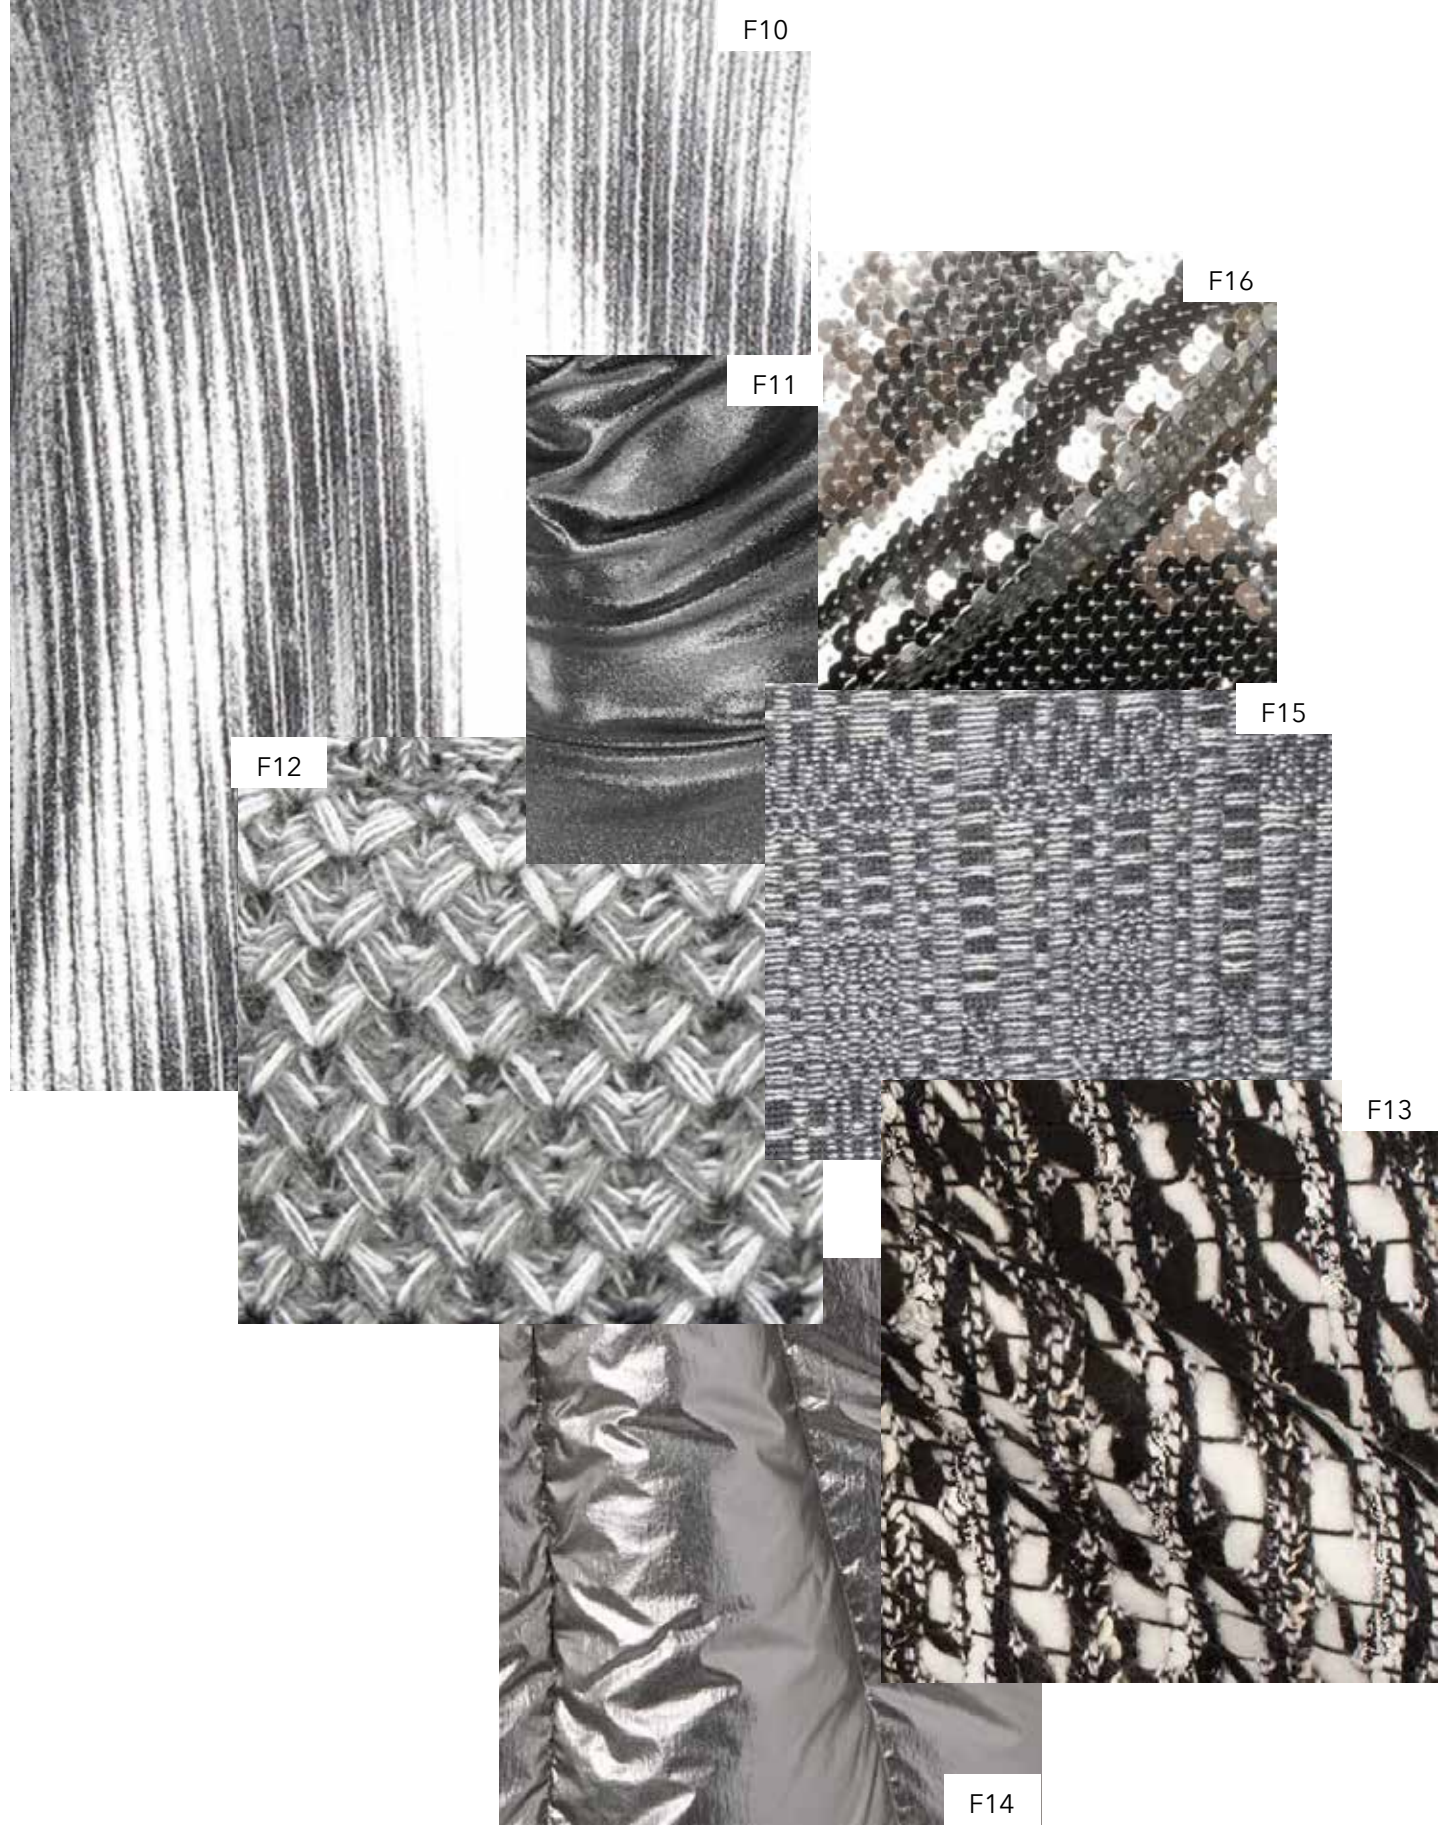

PROTECT

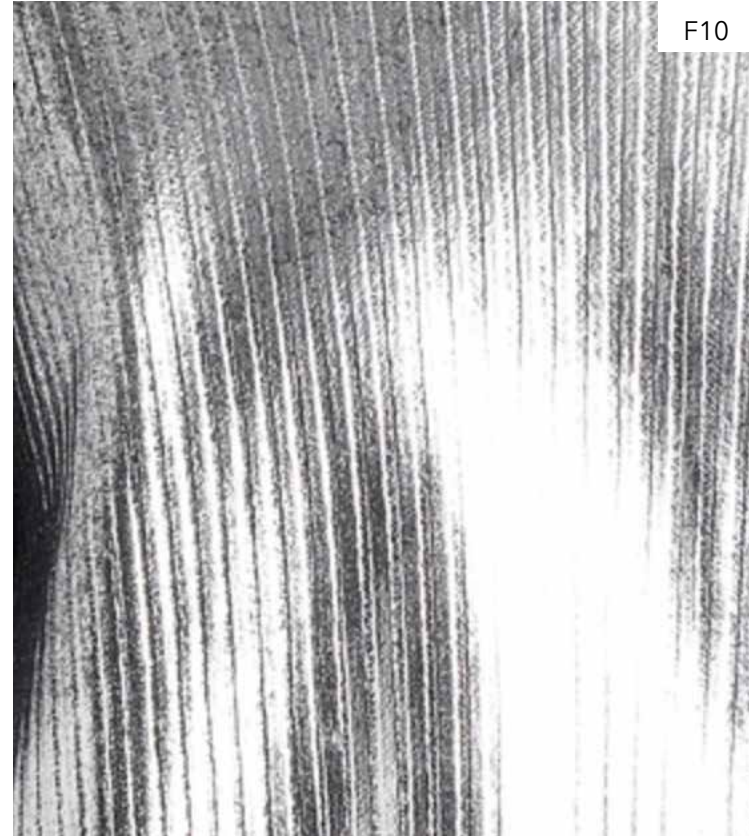

*the fear of the new world
in Protective Antimicrobial Gears*

It is time to reverse and be out in the most safest way.
Gear yourself with the Antimicrobial Coatings, Armour Strong Dyneema with Wool,
and Naturally Shimmering Copper Woven into our Merino Wool

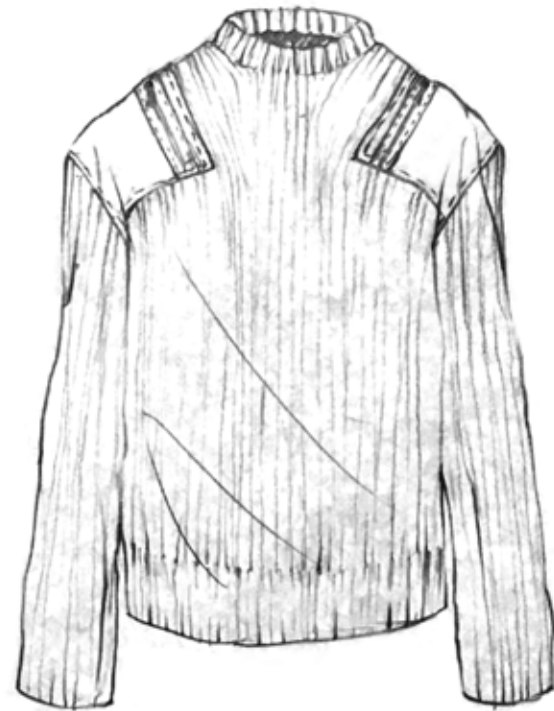

ANTIMICROBIAL SILVER COATING

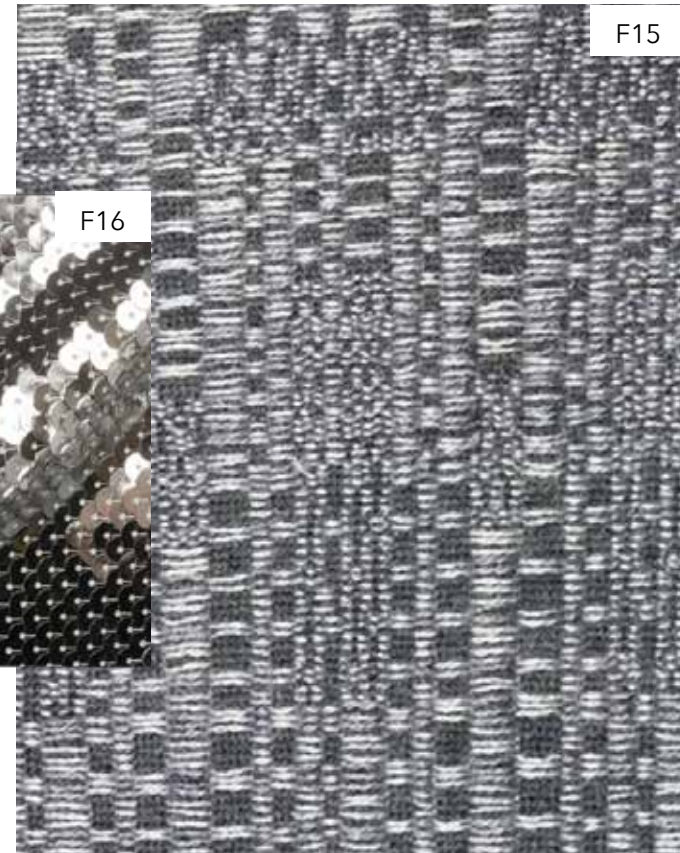

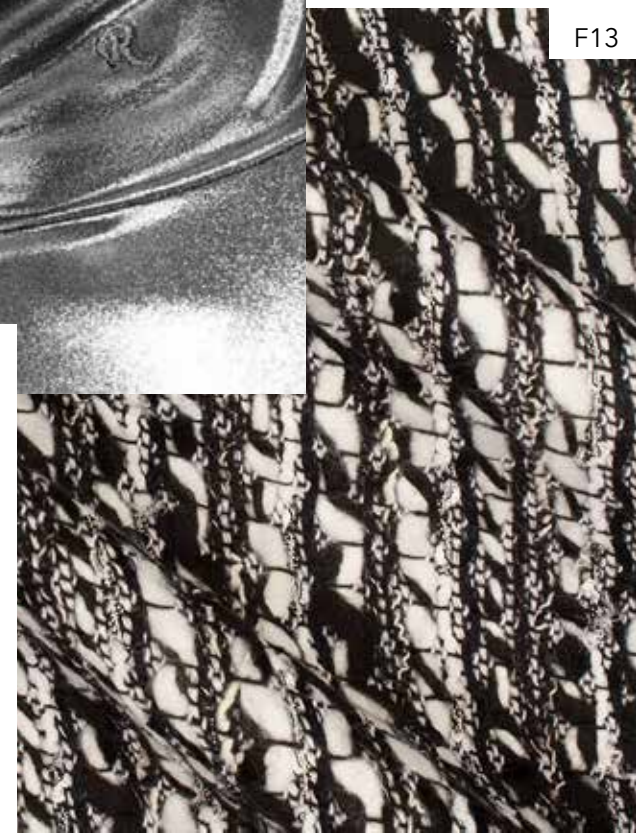

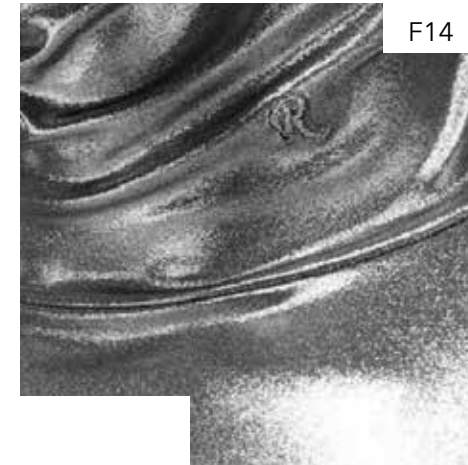

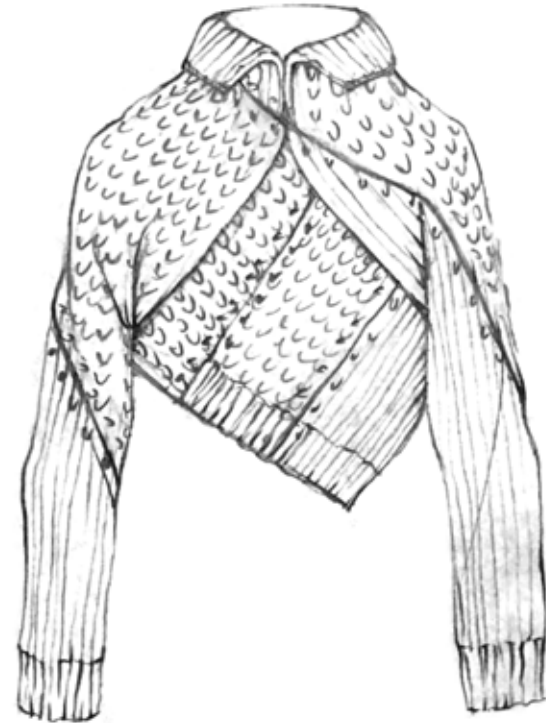

With the pandemic, An urgent need for antimicrobial finishings has risen. Silver and copper nanoparticles are combined to limit viral penetration and reduce the risk of secondary transmission and infection. The compound can be sprayed or dip-coated onto textiles.

DYNEEMA WOOL

Dyneema can be combined with natural yarns such as wool to make garments significantly stronger without compromising comfort. Being a fiber stronger than steel, Dyneema is perfect for outdoor and high functioning apparel.

COPPER WOVEN WOOL

With the same process as dip-coating silver, copper is also used for antimicrobial purposes. Copper nanoparticles can be woven with natural wool yarns to offer an iridescent finishing with antiviral protection.

ALT- ACTIVEWEAR

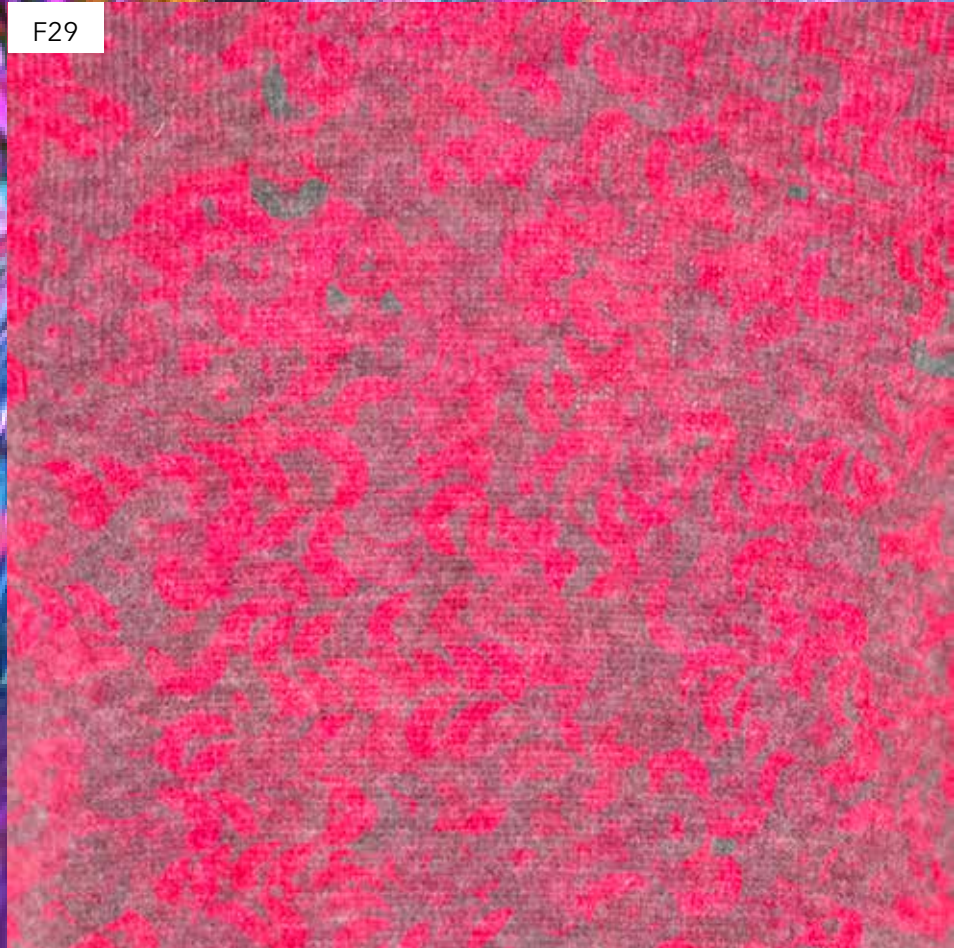

While wool can be seen as dense and ultimately comfortable, the yarn can also be woven into the perfect textile for active wear. Merino wool offers odor control, thermo regulating and moisture retaining.

Cellulose is one of the most abundant polymers on Earth, originating from anything from fruit peels, or algae, this polymer can be developed into this Bio Iridescent Sequin. It provides a sustainable approach to enhancing and adorning natural yarns.
